File Explorer

-
- Before we talk about File Explorer, we should talk about what you can view in File Explorer.

Files

-
- There are many types of Files which are created by different types of source code.

Source Code

- Source code is made from different program languages.

Programming languages:

- Assembly language controls machine code (101010101) and is the lowest language. All other languages are developed from Assembly language.

Higher Languages:

C++, C#, Visual Basic, Fortran, Pascal, Cobal, Java, etc.

Programs

-
- Programs are made up of one File or many files.

File and Program Names

-
- File and Program Names are made up of two parts separated by a period.
 - Left of the period is the name of the file or program.
 - Right of the period is the file extension.
 - Example: file = text.txt
 - Example: program = word.doc

File Extensions

- Programs and files have different extensions.

- A file extension is the second part of a file name which starts right of a period and has 3 or more characters.

File Explorer

The screenshot displays the Windows File Explorer interface. At the top, the title bar reads "File Explorer" with standard window controls. Below it is a ribbon with tabs for "Home", "Share", and "View". The "Home" tab is active, showing a ribbon with groups: Clipboard (Pin to Quick access, Copy, Paste, Copy path, Paste shortcut), Organize (Move to, Copy to, Delete, Rename), New (New item, Easy access, New folder), Open (Properties, Edit, History), and Select (Select all, Select none, Invert selection). Below the ribbon is a navigation bar with "Quick access" and a search box. The left navigation pane shows "Quick access" (Desktop, Downloads, Documents, Pictures, freegames, Podcast, podcastlinks, sponsors) and "OneDrive". The main area is divided into "Frequent folders (8)" and "Recent files (20)".
